

Elevation Profile - Guatemala - Huehuetenango to El Rancho (CA9)

Statistics: Length: 292 km, av. ascent: 1397 m / 100 km

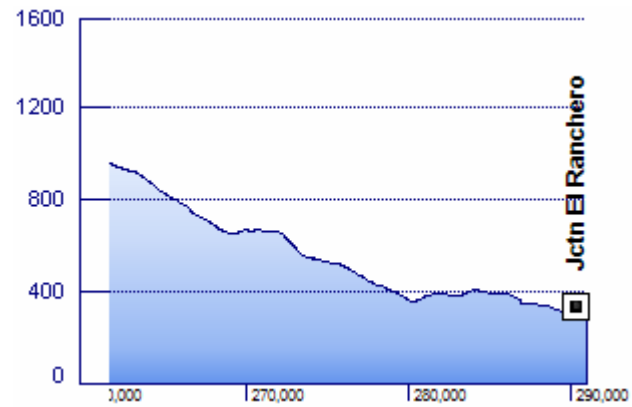

Comments: The road from Huehuetenango to Coban has been paved lately and is wonderful now! Absolutely recommendable, perfect pavement, few traffic and terrific countryside.
30 km east of San Cristobal were still unpaved but they were already working on it.
Note that there are approx. 15 kilometers missing in the beginning of the track (to Huehuetenango on an altitude of 1800 m).
